

# Forensic Phone Analyser

Our ability to communicate instantly and globally via mobile phones and computers brings significant rewards, but also significant challenges and potential threats.

**Ask yourself the following questions:**

**Do you need to get better, faster more reliable intelligence from Mobile Phones?**

**Are you frustrated by the lack of intelligence you are getting from the information you hold?**

**Is dirty data hampering your efficiency?**

**Would you like to see the power of what you already have?**

**FPA let's you see what other systems can't !**

Welcome to  
**FPA** (Forensic  
Phone Analyser)

Through FPL's commitment to innovation and understanding client needs, we have successfully launched FPA thereby enabling investigators to quickly, efficiently and cost effectively get the intelligence and evidence needed from mobile phones and

telecommunications networks. Our technology allows analysts to discover a wide range of critical information in ways which until now have not been possible. This powerful technology can be used to analyse a single device or thousands of devices at the same time. It has already helped track, monitor and intervene in criminal activity across vast networks of mobile phones and users.

Extremely large amounts of telecommunications data is automatically analysed and made available to analysts in real-time.

We have to ensure that our ability to extract, collect and store data is matched by our ability to analyse and make sense of that data.

**The power is in the data.**

Analysts can concentrate on what they do best – analyse rather than spend their time in data management and data cleansing. They can search for phone numbers, SMS text messages, contacts and images, and they can view entire data, not just case by case.

**FPA lets you SEE what other systems can't.**

**How does it do it?**

By focussing on the DATA not on the tools or the systems you are using to store the data. We have the ability to **OPTIMISE THE POWER OF YOUR DATA.** Let us show you how.

**AUTOMATED DATA  
CLEANSING AND  
ANALYTICS**

**FPA**   
FORENSIC PHONE ANALYSER

## IF SOMEONE WERE TO ASK YOU:

**DO YOU WANT TO OPTIMISE YOUR RESULTS, BUT AT THE SAME TIME REDUCE YOUR BUDGET?**

What would your response be:

- a) Not possible – got to be a catch
- b) Maybe – what about the cost of system integration?
- c) I'm all for choice – let's take a look

**NOW WHETHER YOU'RE A WILLING CONVERT OR A SCEPTIC TAKE A LOOK AT THE BENEFITS OF FPA... THEN DECIDE**

## THE FACTS

- 01. No system integration
- 02. No manual cleansing of data - data cleansing and number normalisation is automated and catalogued
- 03. Networks generated automatically

- 04. View entire data – not just case by case
- 05. Ability to pick out intervention points and links between cases
- 06. Contacts, numbers, names, messages and images are fully searchable and classified
- 07. The need to look up country and area codes is fully integrated and searchable; all numbers are mapped to their zone, country and area
- 08. Clustering, network analysis and visual interaction gives clear overview of criminal community
- 09. Standard text reporting – can be exported into various formats
- 10. Can be run on a laptop or multi-user database
- 11. Massive time-saving on data upload
- 12. Targeted employee deployment and intervention leads to massive cost savings

## Seeing is believing.
